Orthopaedic services offered at Le Bonheur cover the complete spectrum of pediatric orthopaedic care, from the treatment of simple fractures to the management of complex congenital, developmental and post-traumatic deformities to the care of the severely injured child. Our pediatric orthopedists provide comprehensive operative and non-operative care to children, emphasizing a family-centered approach. Our services include:

- Evaluation and treatment of scoliosis and spinal deformities
- Evaluation and treatment of musculoskeletal diseases and tumors
- Evaluation and treatment of congenital anomalies
- Inpatient and outpatient management of traumatic injuries, including fractures and dislocations
- Sports medicine
- Treatment of pediatric amputee patients

Le Bonheur offers board-certified, fellowship-trained pediatric orthopaedic surgeons with extensive national and international experience. Physicians are skilled in advanced, minimally invasive, computer-assisted surgical techniques. The team includes full-time physical and occupational therapists who offer comprehensive gait, PT, OT evaluations, as well as complete orthotic and prosthetic care. It offers a full range of custom-made devices including wheelchair evaluation and fitting. Social workers and child life specialists also play a role in the child's recovery.

Le Bonheur offers many specialized orthopaedic clinics. Clinics held at Le Bonheur include:

Fracture Clinic

(901) 287-6073

The Orthopaedic Fracture Clinic is the largest clinic at Le Bonheur, serving the needs of injured children in the region. Approximately 160-200 children are treated per week. Many of these patients are seen for follow-up and ongoing care after initial evaluation and treatment in the Emergency Department. Children who require surgical treatment of their fractures are also followed in this clinic. Patients with post-traumatic deformities, infections and nerve injuries are also evaluated and treated in the fracture clinic.

Pediatric Orthopaedic Clinic

(901) 287-6073

This clinic provides care for children with common orthopaedic conditions such as cerebral palsy and gait abnormalities. The clinic also cares for patients with hip conditions such as developmental dysplasia (DDH), slipped capital femoral epiphysis (SCFE) and Perthes Disease, as well as foot deformities and leg length inequality. Our physicians use the optimal combination of operative and non-operative techniques to maximize a child's function and activity. Advanced surgical techniques such as the Ilizarov method for limb lengthening as well as computer-assisted deformity correction are used.

Scoliosis Clinic

(901) 287-6073

Campbell Clinic pediatric spine surgeons work closely with Le Bonheur's Scoliosis Clinic to provide comprehensive care for children with all types of spinal deformities including scoliosis, spondylolisthesis and spinal fractures. All forms of treatment including observation, bracing and surgery are used to achieve the optimal outcome. Bracing is provided by a skilled team of certified orthotists who specialize in spinal care. Campbell Clinic surgeons have training in advanced spinal surgery techniques including the use of the VEPTR (titanium rib) for growing children with spinal deformities, spinal growth modulation/stapling, intraoperative spinal cord monitoring and computer-assisted surgical techniques.

Clubfoot

(901) 287-6073

Early diagnosis and treatment of clubfoot is the key to successful results for the patient, and many children begin receiving treatment within two weeks of birth. The clinic physicians are experts in the use of the Ponseti technique for the non-operative treatment of clubfoot. Surgical management of clubfoot deformities, when necessary, and the long-term follow-up of children treated for clubfoot is provided as well. The staff has extensive international experience with untreated and severe clubfoot deformities.

Hand Clinic

(901)287-6073

The Hand Clinic provides comprehensive care for patients with conditions that affect the hand, including congenital and post-traumatic deformities. Commonly treated conditions include polydactyly or the presence of other complex hand injuries including burns. This clinic is supported by the departments of physical and occupational therapy to help children achieve the best possible outcome.

Spina Bifida (Myelomeningocele)

(901) 287-6073

The Spina Bifida clinic is comprised of a team of specialists who have been assembled to evaluate patients and recommend treatment. The clinic utilizes a holistic patient-centered approach providing medical, rehabilitative, psychosocial and developmental treatment to patients and their families. The pediatric spina bifida teams consists of a developmental pediatrician, a neurosurgeon, a urologist, an orthopaedic surgeon, a medial social worker, an orthotist, a seating specialist, a physical therapist, an occupational therapist and a clinical case manager. Through this multi-disciplinary approach, children are able to receive specialized care for spina bifida in a convenient one-visit setting.
